**Probabilistic Nodes Combination (PNC) for Object Modeling and Contour Reconstruction** Apr 18 2020 Shape representation and reconstruction is a vital aspect of modern computer science applications. New modeling methods and techniques can significantly optimize these processes. Probabilistic Nodes Combination (PNC) for Object Modeling and Contour Reconstruction is an innovative reference source that examines the latest trends in 2D curve interpolation and modeling methodologies. Focusing on a range of pertinent topics such as 3D surface modeling, high-dimensional data, and numerical methods, this is an ideal publication for programmers, researchers, students, and practitioners interested in emerging methods in object modeling and contour reconstruction.

**Sport Examined Questions and Answers Pack** Nov 18 2022 Contains model questions and answers to provide practice for students, with differentiated tests for Foundation and Higher level students. Covers all the GCSE and Standard Grade PE and Sport specifications.

*Parliamentary Debates (Hansard).* May 20 2020

*Computational Collective IntelligenceTechnologies and Applications* Feb 09 2022 The two-volume set LNAI 6922 and LNAI 6923 constitutes the refereed proceedings of the Third International Conference on Computational Collective Intelligence, ICCCI 2011, held in Gdynia, Poland, in September 2011. The 112 papers in this two volume set presented together with 3 keynote speeches were carefully reviewed and selected from 300 submissions. The papers are organized in topical sections on knowledge management, machine learning and applications, autonomous and collective decision-making, collective computations and optimization, Web services and semantic Web, social networks and computational swarm intelligence and applications.

**Theological Dictionary of the Old Testament** Jul 14 2022 This is Volume 8 of a major, multivolume reference work in which the key Hebrew and Aramaic words of the Old Testament are discussed in depth with emphasis on meaning. This series is as fundamental for Old Testament studies as its companion set, the Kittel-Friedrich Theological Dictionary of the New Testament has been for study of the New Testament.

**The Religions of Ancient Israel** Jun 20 2020 This is the most far-reaching interdisciplinary investigation into the religion of ancient Israel ever attempted. The author draws on textual readings, archaeological and historical data and epigraphy to determine what is known about the Israelite religions during the Iron Age (1200-586 BCE). The evidence is synthesized within the structure of an Israelite worldview and ethos involving kin, tribes, land, traditional ways and places of worship, and a national deity. Professor Zevit has originated this interpretive matrix through insights, ideas, and models developed in the academic study of religion and history within the context of the humanities. He is strikingly original, for instance, in his contention that much of the Psalter was composed in praise of deities other than Yahweh. Through his book, the author has set a precedent which should encourage dialogue and cooperative study between all ancient historians and archaeologists, but particularly between Iron Age archaeologists and biblical scholars. The work challenges many conclusions of previous scholarship about the nature of the Israelites' religion.

**Web Technologies and Applications** Feb 15 2020 This book constitutes the refereed proceedings of the 17th Asia-Pacific Conference APWeb 2015 held in Guangzhou, China, in September 2015. The 67 full papers and presented together with 3 industrial track papers and 7 demonstration track papers were carefully reviewed and selected from 146 submissions. The papers cover a wide spectrum of Web-related data management problems, and provide a thorough view on the rapid advances of technical solutions.

**Advances in Information Systems Development** Jan 20 2023 This volume features a collection of papers on emerging concepts, significant insights, novel approaches and ideas in information systems development (ISD). It examines and investigates up-and-coming trends in ISD in general, emphasizing the continuous collaboration between developers and operators to optimize the software delivery time. The book gathers selected papers from the 29th International Conference on Information Systems Development held at Universitat Politècnica de València, Spain, September 8-10, 2021. The theme of ISD2021 was “Crossing Boundaries between Development and Operations (DevOps) in Information Systems.” The revised and extended papers focus on the influences among information systems, organizational structures, processes and people from its conception to its operation. They examine methodological issues and ways in which the IS designers, developers and operators are transforming organisations and society through information systems.

Ocr Teacher Support Pack Apr 30 2021 Encompasses revision checklists to help students of varying abilities assess their progress. Features exercises to develop ICT skills and analysis of performance and coaching. Easily adapted to suit personal teaching requirements and help save preparation and marking time outside of lessons.

*Journals and Appendix to the Journals of the Legislative Council* Jan 28 2021

*Frequently Asked Questions with Answers : Present Labour Laws and Upcoming Labour Codes* Dec 07 2021 It is very natural and expected that any professional in any area of specialisation gets some sudden doubt or needs clarification on any issue. More particularly in the area of legal compliance or even while seeking or providing clarification to anyone, including colleagues and superiors. We continue to live in an era of the plethora of labour legislations, that too varied interpretations under judicial pronouncements. And many times, we need fast and quick inputs. And it is our experience that when we get or know the clarifying answer assertively, most problems get solved in a matter of seconds. Whenever I conduct sessions on Labour Laws, I conclude with a set of objective tests to evaluate and or to further clarify the doubts which have shown positive indications. In teaching in Management Schools, MBA, MSW, and Law, the faculty must be equipped with precise answers and even administering tests and evaluations. Now, all of us are aware of the upcoming new Four Labour Codes. Many of us, start asking ourselves, what are the answers in the Four Labour Codes and a comparative clarification? Keeping these in view, I conceived an idea and, after a thought-provoking process, to compile all possible questions and precise answers in respect of all labour legislations as also under the four Labour Codes. I am sure this would help everyone to get a comparative answer and/or clarifications simultaneously. I have been to compile around 600 questions covering 22 labour legislations, including “Management of Discipline “. The answers cover under present labour legislations as well as under Four Labour Codes. I have tried to substantiate the answers based on judicial views/judgements wherever possible. I am sure this book – FAQs & ANSWERS covering the Labour Legislations, will be a handy reckoner, a handbook to the HR Fraternity, Faculty and Students of management schools, MBA, MSW & Law. K.Vittala Rao President, KVR Management Services, Legal & Management Consultancy, Bangalore.

**Artificial Intelligence and Soft Computing** Oct 17 2022 The two-volume set LNAI 7267 and LNCS 7268 (together with LNCS 7269) constitutes the refereed proceedings of the 11th International Conference on Artificial Intelligence and Soft Computing, ICAISC 2012, held in Zakopane, Poland in April/May 2012. The 212 revised full papers presented were carefully reviewed and selected from 483 submissions. The papers are organized in topical sections on neural networks and their applications, computer vision, image and speech analysis, data mining, hardware implementation, bioinformatics, biometrics and medical applications, concurrent parallel processing, agent systems, robotics and control, artificial intelligence in modeling and simulation, various problems of artificial intelligence.

*Cost Accounting (For B. Com, Sem.4, Delhi University)* Nov 13 2019 This book has been written specifically for the students of BCom (Hons) of the University of Delhi in accordance with its prescribed syllabus and that of School of Open Learning. Its basic features are the same as the mother book Cost Accounting—Principles and Practice, which is a UGC recommended text for the last many years. Thus, it gives a thorough grounding in cost concepts, cost behaviour, and costing methods. The subject matter has been organized on ‘first things first’ basis to sustain the interest of the students. Every discussion involving conceptual difficulties is immediately followed by a numerical example.

*Introduction to Differential Equations with Dynamical Systems* Jul 02 2021 Many textbooks on differential equations are written to be interesting to the teacher rather than the student. Introduction to Differential Equations with Dynamical Systems is directed toward students. This concise and up-to-date textbook addresses the challenges that undergraduate mathematics, engineering, and science students experience during a first course on differential equations. And, while covering all the standard parts of the subject, the book emphasizes linear constant coefficient equations and applications, including the topics essential to engineering students. Stephen Campbell and Richard Haberman—using carefully worded derivations, elementary explanations, and examples, exercises, and figures rather than theorems and proofs—have written a book that makes learning and teaching differential equations easier and more

relevant. The book also presents elementary dynamical systems in a unique and flexible way that is suitable for all courses, regardless of length.

*Natural Language Processing: Concepts, Methodologies, Tools, and Applications* May 12 2022 As technology continues to become more sophisticated, a computer's ability to understand, interpret, and manipulate natural language is also accelerating. Persistent research in the field of natural language processing enables an understanding of the world around us, in addition to opportunities for manmade computing to mirror natural language processes that have existed for centuries. Natural Language Processing: Concepts, Methodologies, Tools, and Applications is a vital reference source on the latest concepts, processes, and techniques for communication between computers and humans. Highlighting a range of topics such as machine learning, computational linguistics, and semantic analysis, this multi-volume book is ideally designed for computer engineers, computer and software developers, IT professionals, academicians, researchers, and upper-level students seeking current research on the latest trends in the field of natural language processing.

**Life and Mortality in Ugaritic** Feb 26 2021 While topics such as death, funerary cult, and the netherworld have received considerable scholarly attention in the context of the Ugaritic textual corpus, the related concept of life has been relatively neglected. Life and Mortality in Ugaritic takes as its premise that one cannot grasp the significance of mwt ("to die") without first having wrestled with the concept of ?yy ("to live"). In this book, Matthew McAfee takes a lexical approach to the study of life and death in the Ugaritic textual corpus. He identifies and analyzes the Ugaritic terms most commonly used to talk about life and mortality in order to construct a more representative framework of the ancient perspective on these topics, and he concludes by synthesizing the results of this lexical study into a broader literary discussion that considers, among other things, the implications for our understanding of the first-millennium Katumuwa stele from Zincirli. McAfee's study complements previous scholarly work in this area, which has tended to rely on conceptual and theoretical treatment of mortality, and advances the discussion by providing a more focused lexical analysis of the Ugaritic terms in question. It will be of interest to Semitic scholars and those who study Ugaritic in particular, in addition to students of the culture of the ancient Levant.

*The Calculus of Happiness* Aug 03 2021 How math holds the keys to improving one's health, wealth, and love life? What's the best diet for overall health and weight management? How can we change our finances to retire earlier? How can we maximize our chances of finding our soul mate? In *The Calculus of Happiness*, Oscar Fernandez shows us that math yields powerful insights into health, wealth, and love. Using only high-school-level math (precalculus with a dash of calculus), Fernandez guides us through several of the surprising results, including an easy rule of thumb for choosing foods that lower our risk for developing diabetes (and that help us lose weight too), simple "all-weather" investment portfolios with great returns, and math-backed strategies for achieving financial independence and searching for our soul mate. Moreover, the important formulas are linked to a dozen free online interactive calculators on the book's website, allowing one to personalize the equations. Fernandez uses everyday experiences--such as visiting a coffee shop--to provide context for his mathematical insights, making the math discussed more accessible, real-world, and relevant to our daily lives. Every chapter ends with a summary of essential lessons and takeaways, and for advanced math fans, Fernandez includes the mathematical derivations in the appendices. A nutrition, personal finance, and relationship how-to guide all in one, *The Calculus of Happiness* invites you to discover how empowering mathematics can be.
