As interactive application software such as apps, installations, and multimedia presentations have become pervasive in everyday life, more and more computer scientists, engineers, and technology experts acknowledge the influence that exists beyond visual explanations. Computational Solutions for Knowledge, Art, and Entertainment: Information Exchange Beyond Text focuses on the methods of depicting knowledge-based concepts in order to assert power beyond a visual explanation of scientific and computational notions. This book combines formal descriptions with graphical presentations and encourages readers to interact by creating visual solutions for science-related concepts and presenting data. This reference is essential for researchers, computer scientists, and academics focusing on the integration of science, technology, computing, art, and mathematics for visual problem solving. In the space of three years, from 2009 to 2012 Bernie Madoff, Tom Petters and R. Allen Stanford were all convicted for running multi-billion dollar Ponzi schemes. These three schemes alone have had the largest financial take in U.S. history. But what role does the economy and legislation play in the occurrences of Ponzi schemes? What is the nature of Ponzi schemes and what are their tools and mechanisms? What can we know about Ponzi perpetrators? Unraveling the answers to these questions (and many more), Marie Springer provides the first representative portrait of Ponzi schemes, their perpetrators, and their victims. Adopting a multidisciplinary approach, she begins by presenting an overview of different types of Ponzi schemes. She later explores perpetrators and victims of Ponzi schemes followed by a close examination of economic trends, regulatory changes, and the financial relationship with Ponzi schemes. Other key features include:

- A non-technical overview of both offender based and offense-based approaches of studying this form of fraud.
- Examples of Ponzi schemes and Ponzi schemers.
- A wealth of descriptive statistics on known federal cases from the 1960s until the present to quantify this specific form of fraud.

Broadening our understanding of Ponzi schemes as a form of white-collar crime, The Politics of Ponzi Schemes provides an excellent foundation for students and practitioners of public administration, banking, as well as investors, finance and accounting, law enforcement officers, legislators and regulators. The financial technology environment is a dynamic, high-pressured, fast-paced world in which developing fast and efficient buy-and-sell order processing systems and order executing (clearing and settling) systems is of primary importance. The orders involved come from an ever-changing network of people (traders, brokers, market makers) and technology. To prepare people to succeed in this environment, seasoned financial technology veteran Roy Freedman presents both the technology and the finance side in this comprehensive overview of this dynamic area. He covers the broad range of topics involved in this industry—including auction theory, databases, networked computer clusters, back-office operations, derivative securities, regulation, compliance, bootstrap statistics, optimization, and risk management—in order to present an in-depth treatment of the current state-of-the-art in financial technology. Each chapter concludes with a list of exercises; a list of references; a list of websites for further information; and case studies. With amazing clarity, Freedman explains both the technology side and the finance side of financial technology Accessible to both finance professionals needing to upgrade their technology knowledge and technology specialists needing to upgrade their finance knowledge The fast and easy way to get a handle on ETFs Exchange-traded funds (ETFs) have a strong foothold in the marketplace, because they are less volatile than individual stocks, cheaper than most mutual funds, and subject to minimal taxation.
