More Than Guided Reading

Dec 13 2021 Is there too much emphasis on guided reading in primary classrooms? It's a

question that many educators, like kindergarten teacher and literacy coach Cathy Mere, are starting to ask. Guided reading provides opportunities to teach students the strategies they need to learn how to read increasingly challenging texts, but Cathy found that she needed to find other ways to help students gain independence. While maintaining guided reading as an important piece of their reading program, teachers need to offer students opportunities during the day to

develop as readers, to learn to choose books, to find favorite genres and authors, and to talk about their reading. In *More Than Guided Reading*, Cathy shares her journey as she moved from focusing on guided reading as the center of her reading program to placing children at the heart of literacy learning?not only providing more time for students to discover their reading lives, but also shaping instruction to meet the needs of the diverse learners in her classroom. By changing the structure of the day, Cathy found she was better able to adjust the support she was providing students, allowing time for whole-class focus lessons, conferences, and opportunities to share ideas, as well as reading from self-selected texts using the strategies, skills, and understandings acquired in reader's workshop. The focus lesson is the centerpiece of the workshop. It is often tied to a read-aloud and connected to learning from the previous day, helping to build skills, extend thinking, and develop

independence over time. This thoroughly practical text offers numerous sample lessons, questions for conferences, and ideas for revamping guided reading groups. It will help teachers tweak the mix of instructional components in their reading workshops, and provoke school-wide conversations about the place of guided reading in a complete literacy curriculum.

Computers As Cognitive Tools

Mar 24 2020 Highlighting and illustrating several important and interesting theoretical trends that have emerged in the continuing development of instructional technology, this book's organizational framework is based on the notion of two opposing camps. One evolves out of the intelligent tutoring movement, which employs artificial-intelligence technologies in the service of student modeling and precision diagnosis, and

the other emerges from a constructivist/developmental perspective that promotes exploration and social interaction, but tends to reject the methods and goals of the student modelers. While the notion of opposing camps tends to create an artificial rift between groups of researchers, it represents a conceptual distinction that is inherently more interesting and informative than the relatively meaningless divide often drawn between "intelligent" and "unintelligent" instructional systems. An evident trend is that researchers in both "camps" view their computer learning environments as "cognitive tools" that can enhance learning, performance, and understanding. Cognitive tools are objects provided by the instructional environment that allow students to incorporate new auxiliary methods or symbols into their social problem solving which otherwise would be unavailable. A final section of the book represents

researchers who are assimilating and accommodating the wisdom and creativity of their neighbors from both camps, perhaps forming the look of technology for the future. When the idea of model tracing in a computer-based environment is combined with appreciation for creative mind-extension cognitive tools and for how a community of learners can facilitate learning, a camp is created where AI technologists and social constructivist learning theorists can feel equally at home.

Guided Writing for Students of Indonesian and Malay

Jul 08 2021 "Guided Writing comprises 12 lessons which help a student develop a variety of writing skills. These include: writing chronological sequences, indicating spatial relations, classifying, comparing and contrasting, generalising, showing cause and effect, expressing opinion, defining, predicting, hypothesising, proposing and refuting. A set of terms and sentence structures accompanies each lesson, followed by a set of exercises. These are both guided and free. For the guided exercises, students use data from Indonesian and Malaysian newspapers. Students write paragraphs or essays on a variety of topics which include: detailing the causes of unemployment or the effect of heavy rain in Jakarta, classifying TV programmes or national currencies, comparing

horoscopes or the result of earthquakes in different areas, generalising about freedom of the press or the effect of junk food on children, expressing opinions about tobacco sponsorship of sport or searching for love on the internet, predicting the potential for a tsunami or flooding, or the successes of a film or restaurant. Suggested topics are given for the free exercises. Both guided and free exercises are of varying levels of difficulty. These range from an autobiographical account of one's studies at high school or university, to drafting proposals as the head of a company or making predictions about future developments in medicine. Also presented are sample outlines and paragraphs, sample letter formats and models for writing definitions. The Indonesian and Malay texts are presented in a parallel format enabling immediate comparison between the two. This allows students to develop a dominant competence in one version of the language, and a general

familiarity with the other. New to this edition are two full glossaries. The first, English to Indonesian and Malay, includes all of the English words in the terms, or istilah, section of each writing lesson and their Indonesian and Malay equivalents, as well as the number of the lesson where the term was first introduced. The second glossary, Indonesian and Malay to English, includes all of the Indonesian and Malay words in the text, including the newspaper selections presented as part of the guided writing exercises.
