The new edition of Clinical Nursing Practices reflects the many changes in nurse education and practice. A team of clinical and education experts has updated the core practices contained within this text, while to ensure continuity the previous editors have acted as consultants in the development of this edition. To encourage reflective practice, self-assessment questions remain at the end of each chapter for some of the practices. Where appropriate, certain practices are evidenced mainly by National Guidelines and Standards such as Cardio Pulmonary Resuscitation, Infection Control and Blood Transfusion; consequently, the presentation of the skill or procedure reflects this. The updated text addresses the wider issues which impact on everyday nursing and healthcare practice and is specially written to meet the needs of nurses today. "Nurses play a vital role in improving the safety and quality of patient care -- not only in the hospital or ambulatory treatment facility, but also of community-based care and the care performed by family members. Nurses need to know what proven techniques and interventions they can use to enhance patient outcomes. To address this need, the Agency for Healthcare Research and Quality (AHRQ), with additional funding from the Robert Wood Johnson Foundation, has prepared this comprehensive, 1,400-page, handbook for nurses on patient safety and quality -- Patient Safety and Quality: An Evidence-Based Handbook for Nurses. (AHRQ Publication No. 08-0043)." - online AHRQ blurb, <http://www.ahrq.gov/qual/nursesdbk/> The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing. The study reviews the importance of safe patient handling technique in reducing musculoskeletal injuries among health care workers. "About 38% of all nurses are affected by back injuries, nearly all of these injuries (98%) are due to nurses lifting and moving patients manually" (Baptiste, A., and Boda, V. 2006). Prevalence of musculoskeletal disorders has been noted to vary across occupational groups and over national boundaries like subjectivity of terms, variations in instrument, different work and cultural settings, perception and reporting of pain and disorders et cetera Occupational injuries among nurses affect health care system in different ways like shortage of nurses, mandatory overtime and loss of work time. Moreover it causes financial burden to hospitals, Insurance companies and health care providers. The research below emphasizes implementation of safe patient handling technique and ergonomic principle to reduce musculoskeletal injuries among health care workers.
