Knowledge management (KM) - or the practice of using information and collaboration technologies and processes to capture organizational learning and thereby improve business performance - is becoming one of the key disciplines in management, especially in large companies. Many books, magazines, conferences, vendors, consultancies, Web sites, online communities and email lists have been formed around this concept. This practical book focuses on the vast offerings of KM solutions technology, content, and services. The focus is not on technology details, but on how KM and IT practitioners actually use KM tools and techniques. Over twenty case studies describe the real story of choosing and implementing various KM tools and techniques, and experts analyse the trends in the evolution of these technologies and tools, along with opportunities and challenges facing companies harnessing them. Lessons from successes and failures are drawn, along with roadmaps for companies beginning or expanding their KM practice. The introductory chapter presents a taxonomy of KM tools, identifies IT implications of KM practices, highlights lessons learned, and provides tips and recommendations for companies using these tools. Relevant literature on KM practices and key findings of market research groups and industry consortia such as IDC, Gartner and APQC, are presented. The majority of the book is devoted to case studies, featuring clients and vendors along the entire spectrum of solutions: hardware (e.g. handheld/wearable devices), software (e.g. analytics, collaboration, document management) and content (e.g. newsfeeds, market research). Each chapter is structured along the "8Cs" framework developed by the author: connectivity, content, community, commerce, community, capacity, culture, cooperation and capital. In other words, each chapter addresses how appropriate KM tools and technologies help a company on specific fronts such as fostering adequate employee access to knowledge bodies, user-friendly work-oriented content, communities of practice, a culture of knowledge, learning capacity, a spirit of cooperation, commercial and other incentives, and carefully measured capital investments and returns. Vendor history, product/service offerings, implementation details, client testimonials, ROI reports, and future trends are highlighted.

Experts in the field then provide third-party analysis on trends in KM tools and technique areas, and recommendations for KM practitioners. * The only book in which practitioners evaluate various KM solutions * Case studies describe how real companies use KM tools and technologies * Provides clear lessons from real successes and failures - Opens the black box of methodologies and demonstrates that software development is fundamentally a value creation process - Covers new and radical approaches to software development that respond to business demands for shorter investment periods and increased agility - Provides software engineers tools for understanding enterprise-level value creation and managing financial objectives

The U.S. Army War College (USAWC) is proud to present the 28th Edition of *How the Army Runs: A Senior Leader Reference Handbook, 2011-2012*. Publication of this text at this time, when the Army has been at war for almost a decade, has almost completed restructuring of its operating force, and is addressing the structure of the generating force, as well as completing formidable base closure and restationing actions, gives credence to the enduring truth that in order to be successful the Army must sustain and improve itself while it is fully committed to the Nation's bidding. The systems and processes documented and explained in this work are designed to do just that. This text was prepared under the direction of the faculty of the Department of Command, Leadership, and Management. It is intended to be used in an academic environment during the study of the systems and processes used to develop and sustain trained and ready combat forces to be used by the Combatant Commanders. Divulging counterintuitive revelations about what it "really" takes to attract, develop, and retain top performers, this is the definitive guide to today's most urgent business dilemma. This book combines computational intelligence and mathematics to solve theoretical and real-world problems. The real challenges of engineering and other applied sciences, e.g. economics and management, the social sciences, etc., and even everyday life, are increasingly raising complex problems – both in the usual sense, but also in the mathematical and theoretical computer science sense, which is referred to as intractability. Finding exact solutions to the latest problems in mathematics is impossible, and it has been also shown that no further technical advance will ever make it possible to find general and exact solutions to such complex problems. Rather, the goal is to find solutions that are “good enough” or “acceptably accurate,” including models and corresponding algorithms, which is most often achieved by combining traditional mathematical techniques and computational intelligence tools, such as fuzzy systems, evolutionary and memetic algorithms, and artificial neural networks. Consequently, international funding programs, such as the European Commission’s current framework program for research and innovation (Horizon 2020), and the preliminary research team building COST Actions, are devoted to developing new instruments for tackling the challenges that we face in the current technological age. And it goes without saying that research topics concerning the interactions between computational intelligence and traditional mathematics play a key role in overcoming the obstacles associated with the intractability of complex problems. In this book, mathematicians, engineers, and other scientists highlight novel methodological results connecting these two main research areas, and focusing on solving real-life problems. These proceedings represent the work of contributors to the 16th European Conference on Management Leadership and Governance (ECMLG 2020) hosted by ACI and EM-Normandie Business School, Oxford, UK, UK on 26 – 27th October 2020. The Conference

Chair Dr Paul Griffiths, EM-Normandie Business School, Metis Lab. Oxford, UK

Customer value management is a managerial approach in which customers are perceived as the company's asset, the value of which may be measured and increased through the organization of processes around customer relationships. This book deals with the topic of managing customer lifetime value on the internet, and more specifically on including the role of the internet in customer value proposition to enhance stakeholder and shareholder value. This book also discusses the possibilities of internet-based customer value management and presents a model describing the process leading to it. Its uniqueness lies in presenting a managerial approach to customer relationships rather than offering just another tool of e-marketing. The author's approach is not limited by branches or sectors – differences in customer value management approaches are perceived through a prism of relationships between the company and its customers.

The enterprise data center has evolved dramatically in recent years. It has moved from a model that placed multiple data centers closer to users to a more centralized dynamic model. The factors influencing this evolution are varied but can mostly be attributed to regulatory, service level improvement, cost savings, and manageability. Multiple legal issues regarding the security of data housed in the data center have placed security requirements at the forefront of data center architecture. As the cost to operate data centers has increased, architectures have moved towards consolidation of servers and applications in order to better utilize assets and reduce "server sprawl." The more diverse and distributed the data center environment becomes, the more manageability becomes an issue. These factors have led to a trend of data center consolidation and resources on demand using technologies such as virtualization, higher WAN bandwidth technologies, and newer management technologies. The intended audience of this book is network architects and network administrators.

In this IBM® Redbooks® publication we discuss the following topics:

- The current state of the data center network
- The business drivers making the case for change
- The unique capabilities and network requirements of system platforms
- The impact of server and storage consolidation on the data center network
- The functional overview of the main data center network virtualization and consolidation technologies
- The new data center network design landscape

Organizational change may well be the most oft-repeated and widely embraced term in all of corporate America-but it is also the least understood. The proof is in the numbers: Nearly two-thirds of all change efforts fail, and they carry with them huge human and economic tolls. Lacking any overarching paradigm for change, executives of large, underperforming organizations have been left with little guidance in how to choose the strategies that will lead them to sustained success. In *Breaking the Code of Change*, editors Michael Beer and Nitin Nohria provide a crucial starting point on the journey toward unlocking our understanding of organizational change. The book is based on a dynamic debate attended by the leading lights in the field-including scholars, consultants, and CEOs who have led successful transformations-and presents a series of articles, written by these experts, that collectively address the question: How can change be managed effectively? Beer and Nohria organize the book around two dominant, yet opposing, theories of change-one based on the creation of economic value (Theory E), and the other on building organizational capabilities for the long haul (Theory O). Structured in an unusual and engaging point-counterpoint style, the book enlists the reader directly in the debate, providing a comprehensive overview of the strengths and weaknesses of each theory along every dimension of the change process-from motivation to leadership to compensation issues. The editors argue that the key to solving the paradox of change lies not in choosing between the two processes, but in integrating them. They identify the crucial considerations leaders must make in selecting strategies that satisfy shareholders and develop lasting organizational capabilities. With a groundbreaking conceptual framework applicable to established corporations and small organizations alike, *Breaking the Code of Change* is a unique and authoritative contribution to academic research and management practice on the process of organizational change. Michael Beer is the Cahners-Rabb Professor of Business Administration at Harvard Business School. Nitin Nohria is the Richard P. Chapman Professor of Business Administration at Harvard Business School. A resource for industry professionals and consultants, this book on corporate strategy lays down the theories and models for revitalizing companies in the face of global recession. It discusses cutting-edge concepts, constructs, paradigms, theories, models, and cases of corporate strategic leadership for bringing about transformation and innovation in companies. It demonstrates that great companies are those that make the leap from "good" results to "great" results and sustain these for at least 15 years; it explores,

reviews and analyzes great transformation strategies in this context. Each chapter in the book is appended with transformation exercises that further explicate the concepts. *Managing Innovation* is an established, best-selling text for MBA, MSc and advanced undergraduate courses on innovation management, management of technology, new product development and entrepreneurship. It is also widely used by managers in both the service and manufacturing sectors. Now in its fifth edition, the text has been fully revised and is accompanied by the Innovation Portal at www.innovation-portal.info, which contains an extensive collection of additional digital resources for both lecturers and students. Features: The Research Notes and Views from the Front Line feature boxes strengthen the evidence-based and practical approach making this a must-read for anyone studying or working within innovation. The Innovation Portal at www.innovation-portal.info is an essential resource for both student and lecturer and includes the Innovation Toolkit – a fully searchable array of practical innovation tools along with a compendium of cases, activities, audio and video clips.
