Here's the designer's guide to creating excellent e-books with InDesign Creative professionals are designing more and more e-books and e-zines as digital publishing increasingly gains market share. This book pulls together a wide range of essential information to help them maximize the versatility of InDesign for e-publishing. If you need to know how to build, deploy, and manage digital publications using InDesign, here's your guide to the process, from understanding the platforms and devices and how best to design for them to

creating media-rich content for multiple formats using a variety of technologies. Designers are seeking to sharpen their skills to compete in today's e-publishing market, and this book is packed with necessary information about creating and adapting content for e-publication Explains how to plan a new digital publication, convert a print publication to digital, add multimedia and interactivity, and publish and distribute the finished product Covers platforms, devices, and formats; creating media-rich content; designing for different devices; and managing digital publications Examines Adobe's Digital Publishing System, CSS,

HTML5, and other commercial vehicles available for e-publishing on multiple platforms, including iPad, Kindle, NOOK, and other tablets and e-readers ePublishing with InDesign is a valuable tool for designers seeking to boost their skills and create cutting-edge e-publications. This book aims to achieve the following goals: (1) to provide a high-level survey of key analytics models and algorithms without going into mathematical details; (2) to analyze the usage patterns of these models; and (3) to discuss opportunities for accelerating analytics workloads using software, hardware, and system

approaches. The book first describes 14 key analytics models (exemplars) that span data mining, machine learning, and data management domains. For each analytics exemplar, we summarize its computational and runtime patterns and apply the information to evaluate parallelization and acceleration alternatives for that exemplar. Using case studies from important application domains such as deep learning, text analytics, and business intelligence (BI), we demonstrate how various software and hardware acceleration strategies are implemented in practice. This book is intended for both

experienced professionals and students who are interested in understanding core algorithms behind analytics workloads. It is designed to serve as a guide for addressing various open problems in accelerating analytics workloads, e.g., new architectural features for supporting analytics workloads, impact on programming models and runtime systems, and designing analytics systems. This book constitutes the refereed proceedings of the First Asian Semantic Web Conference, ASWC 2006, held in Beijing, China, in September 2006. The 36 revised full papers and 36 revised short papers presented together with three invited contributions

were carefully reviewed and selected from 208 full paper submissions. The papers are organized in topical sections. This book presents the proceedings of the 6th International Conference on Frontiers of Intelligent Computing: Theory and Applications (FICTA-2017), held in Bhubaneswar, Odisha. The event brought together researchers, scientists, engineers, and practitioners to exchange their new ideas and experiences in the domain of intelligent computing theories with prospective applications to various engineering disciplines. The book is divided into two volumes: Information and Decision Sciences, and

Intelligent Engineering Informatics. This volume covers broad areas of Information and Decision Sciences, with papers exploring both the theoretical and practical aspects of data-intensive computing, data mining, evolutionary computation, knowledge management & networks, sensor networks, signal processing, wireless networks, protocols & architectures etc. The book also offers a valuable resource for students at the post-graduate level in various engineering disciplines. This volume contains annotated English translations of fifty selected legal documents originally written in the Coptic language, dating from the mid-

sixth to the mid-eighth centuries. They include land transfers, sales, wills, property divisions, and intergenerational disputes. The choice of which language to use in recording their transactions was significant for the documents' framers, and the introduction sets these Coptic texts in their historical contexts of the changing society of Egypt, first under Byzantine rule, then under Islamic rule. Since the originals are in a language not known to most classicists or medievalists, making the documents available in English will enable them to be read, studied, and appreciated by a wider audience. --Book Jacket. "This book is a comprehensive

and in-depth reference to the most recent developments in the field covering theoretical developments, techniques, technologies, among others"-- Provided by publisher. Why do people from similar backgrounds who read the same text construct different meanings? Is there a question behind every reading goal, such that reading is an interactive process of asking and answering of questions? Do people who believe that knowledge is dynamic construct meaning differently than those who believe that knowledge is certain? This volume addresses questions such as these and presents cutting edge research and

theory that explores how readers determine text relevance (i.e., the different values they assign to information as they read), how relevance affects understanding, and the implications of these studies for theories of text comprehension. This volume documents in a compelling manner the ongoing international effort to understand how text relevance affects reading and comprehension. Contributing authors represent major academic institutions on three continents and nine countries, demonstrating the multinational interest in text relevance. Why is there so

much interest in text relevance? Learners are inundated with unprecedented amounts of information, and increased research regarding how readers process non-traditional texts (e.g., documents on the web) and multiple documents, for example, underscores the importance of understanding how readers determine the relevance of text information for personal, academic, or professional goals, which can enable educators to design learning situations that help learners get the most out of reading. This book constitutes the refereed proceedings of the 14th International Conference on Web-Age Information

Management, WAIM 2013, held in Beidaihe, China, in June 2013. The 47 revised full papers presented together with 29 short papers and 5 keynotes were carefully reviewed and selected from a total of 248 submissions. The papers are organized in topical sections on data mining; information integration and heterogeneous systems; big data; spatial and temporal databases; information extraction; new hardware and miscellaneous; query processing and optimization; social network and graphs; information retrieval; workflow systems and service computing; recommender systems; security, privacy, and trust;

semantic Web and ontology. This volume contains the best papers presented at the 12th East-European Conference on Advances in Databases and Information Systems (ADBIS 2008) held during September 5-9, 2008, in Pori, Finland. The series of ADBIS conferences is the successor of the annual international workshops with the same title that during 1993-1996 were organized in Russia by the Moscow ACM SIGMOD Chapter. ADBIS 2008 continues the series of ADBIS conferences held in St. Petersburg, Russia (1997), Poznan, Poland (1998), Maribor, Slovenia (1999), Prague, Czech Republic (2000), Vilnius, Lithuania (2001),

Bratislava, Slovakia (2002), Dresden, Germany (2003), Budapest, Hungary (2004), Tallinn, Estonia (2005), Thessaloniki, Greece (2006), and Varna, Bulgaria (2007). The conferences are initiated and supervised by an international Steering Committee chaired by professor Leonid Kalinichenko. The ADBIS conferences established an outstanding reputation as a scientific event of high quality serving as an internationally highly visible showcase for research achievements in the field of databases and information systems. ADBIS 2008 aimed to create conditions for experienced researchers to impart their

knowledge and experience to the young researchers at pre- or post-doctoral level, and to promote interaction and collaboration between European research communities (especially from Central and East Europe) and the rest of the world. The conference encourages contacts between the participants who are nationals of, but active outside, the Member States and Associated States and their colleagues in Member States and Associated States. Special attention is paid to collaboration of researchers in Central and East Europe. "This book is a catalyst for emerging research in intelligent information, specifically

artificial intelligent technologies and applications to assist in improving productivity in many roles such as assistants to human operators and autonomous decision-making components of complex systems"--Provided by publisher. The study of tasks and methods of automated text rubrication was conducted and their prospects for the analysis of unstructured electronic text documents were evaluated taking into account the peculiarities of appeals received from citizens to the authorities. The architecture of the information system of automated analysis of such documents is developed. It implements the proposed multi-

model approach to the rubrication based on the integrated use of intelligent and probabilistic-statistical methods. The procedure of processing citizens' appeals received by the authorities using the document management system and the developed information system is given. Проведено исследование задач и методов автоматизированного рубрицирования текстов и оценены их перспективы для анализа неструктурированных электронных текстовых документов с учетом особенностей обращений граждан, поступающих в органы власти. Разработана

архитектура информационной системы автоматизированного анализа таких документов, реализующая предложенный мультимодельный подход к рубрицированию, основанный на комплексном использовании интеллектуальных и вероятностно-статистических методов. Приведена процедура обработки обращений, поступающих в органы власти, с использованием системы документооборота и разработанной информационной системы. This book constitutes the refereed proceedings of the 10th International Conference

on Asian Digital Libraries, ICADL 2007, held in Hanoi, Vietnam, in December 2007. The 41 revised full papers, 15 revised short papers, and extended abstracts of 10 poster papers presented together with three keynote and three invited papers were carefully reviewed and selected from a total of 154 submissions. The papers are organized in topical sections. Одним из ключевых направлений информатизации деятельности органов государственной власти является разработка и внедрение систем автоматизированной обработки электронных обращений (заявлений,

жалоб, предложений) физических и юридических лиц, поступающих на официальные веб-сайты и порталы органов власти федеральных округов, администраций областей и других территориальных образований. Важную роль при решении данной задачи играет рубрицирование, которое заключается в распределении обращений по тематическим рубрикам, определяющих направления деятельности департаментов, осуществляющих их обработку и подготовку соответствующего ответа. Результаты анализа специфических особенности таких текстовых сообщений

(небольшой размер, отсутствие разметки, наличие ошибок, нестационарность тезауруса и т. п.) подтвердили невозможность применения традиционных подходов к рубрицированию и обосновали целесообразность применения методов интеллектуального анализа данных. В статье предложен новый подход к анализу и рубрицированию электронных неструктурированных текстовых документов, поступающих на официальные веб-сайты и порталы органов государственной власти. Он предполагает формирование древовидной структуры

рубричного поля, основанной на нечетких отношениях различия между синтаксическими характеристиками документов. Анализ основывается на определении нечеткого соответствия этих документов по синтаксическим характеристикам со значениями центров кластеров, проводимого последовательно от корня к листьям построенного нечеткого дерева решений. Предлагаемый метод рубрицирования программно реализован и апробирован при автоматизированной обработке и анализе обращений (заявлений, жалоб

и предложений) граждан, поступающих в Администрацию Смоленской области. Это позволило обеспечить оперативную и качественную актуализацию рубрик и анализ документов в условиях нестационарности состава тезауруса и значимости слов рубрик. This book provides an up-to-date study of the fundamental facets of supporting information technologies: organisation and people, data and information, presentation of information, and process. To improve the effective use of human resources, it is necessary to capture the structure of an organisation and the knowledge of people within the

organisation. Data can be processed to produce new information by either inferring hidden implications or summarising a large volume of information into more manageable information units. Information may also be required to be presented using different perspectives so as to meet individual needs and at the same time reinforce policy on data access rights. Routing of information and job tasks is paramount in ensuring that all necessary steps are taken for a given job. These complementary aspects are explored throughout the volume. The book is a selection of papers presented at the Industrial Session of the 9th

IFIP 2.6 Working Conference on Database Semantics. It will be of significant value to researchers, teachers, students and practitioners. The scope embraces design methodology, implementation techniques, and applications development. Specific topics include knowledge management, intelligent enterprises, query transformation, information sharing and retrieval, data warehousing, and knowledge discovery. Until now there has been no state-of-the-art collection of the most important writings in automatic text summarization. This book presents the key developments in the field in an integrated framework and

suggests future research areas. With the rapid growth of the World Wide Web and electronic information services, information is becoming available on-line at an incredible rate. One result is the oft-decried information overload. No one has time to read everything, yet we often have to make critical decisions based on what we are able to assimilate. The technology of automatic text summarization is becoming indispensable for dealing with this problem. Text summarization is the process of distilling the most important information from a source to produce an abridged version for a particular user or task. Until now there has been no

state-of-the-art collection of the most important writings in automatic text summarization. This book presents the key developments in the field in an integrated framework and suggests future research areas. The book is organized into six sections: Classical Approaches, Corpus-Based Approaches, Exploiting Discourse Structure, Knowledge-Rich Approaches, Evaluation Methods, and New Summarization Problem Areas. Contributors D. A. Adams, C. Aone, R. Barzilay, E. Bloedorn, B. Boguraev, R. Brandow, C. Buckley, F. Chen, M. J. Chrzanowski, H. P. Edmundson, M. Elhadad, T. Firmin, R. P. Futrelle, J. Gorlinsky, U. Innovations Through Information Technology aims to provide a collection of unique perspectives on the issues surrounding the management of information technology in organizations around the world

and the ways in which these issues are addressed. This valuable book is a compilation of features including the latest research in the area of IT utilization and management, in addition to being a valuable source in support of teaching and research agendas. This book presents the proceedings of the 6th International Conference on Frontiers of Intelligent Computing: Theory and Applications (FICTA 2017), held in Bhubaneswar, Odisha. The event brought together researchers, scientists, engineers, and practitioners to exchange their new ideas and experiences in the domain of intelligent computing theories with prospective applications

to various engineering disciplines. The book is divided into two volumes: Information and Decision Sciences, and Intelligent Engineering Informatics. This volume covers broad areas of Intelligent Engineering Informatics, with papers exploring both the theoretical and practical aspects of various areas like ANN and genetic algorithms, human-computer interaction, intelligent control optimisation, intelligent e-learning systems, machine learning, mobile computing, multi-agent systems, etc. The book also offers a valuable resource for students at the post-graduate level in various engineering disciplines. This book

constitutes the refereed proceedings of the Third International Conference on Advances in Computing, Communication and Control, ICAC3 2013, held in Mumbai, India, in January 2013. The 69 papers presented in this volume were carefully reviewed and selected for inclusion in the book. They deal with topics such as image processing, artificial intelligence, robotics, wireless communications; data warehousing and mining, and are organized in topical sections named: computing; communication; control; and others. The papers presented are refereed and from all over the world. They reflect the breadth and depth of the field

of biomedical and health informatics, covering topics such as; health information systems, knowledge and data management, education, standards, consumer health and human factors, emerging technologies, sustainability, organizational and economic issues, genomics, and image and signal processing. As this volume carries such a wide collection, it will be of great interest to anyone engaged in biomedical and health informatics research and application. "The studies of which this book is the result have from the beginning been guided by and in the end confirmed the somewhat old-fashioned conviction of the

author that it is human ideas which govern the development of human affairs," Hayek wrote in his notes in 1940. Indeed, *Studies on the Abuse and Decline of Reason* remains Hayek's greatest unfinished work and is here presented for the first time under the expert editorship of Bruce Caldwell. In the book, Hayek argues that the abuse and decline of reason was caused by hubris, by man's pride in his ability to reason, which in Hayek's mind had been heightened by the rapid advance and multitudinous successes of the natural sciences, and the attempt to apply natural science methods in the social sciences. This volume contains the

proceedings of the International Conference on Information Computing and Applications (ICICA 2010), which was held in Tangshan, China, October 15-18, 2010. As future-generation information technology, information computing and applications become specialized, information computing and applications - cluding hardware, software, communications and networks are growing with ever-increasing scale and heterogeneity and becoming overly complex. The complexity is getting more critical along with the growing applications. To cope with the growing and computing complexity,

information computing and applications focus on intelligent, selfmanageable, scalable computing systems and applications to the maximum extent possible without human intervention or guidance. With the rapid development of information science and technology, information computing has become the third approach of science research. Information computing and applications is the field of study concerned with constructing - telligent computing, mathematical models, numerical solution techniques and using computers to analyze and solve natural scienti?c, social scienti?c and engineering

problems. In practical use, it is typically the application of computer simulation, intelligent computing, internet computing, pervasive computing, scalable computing, trusted computing, autonomy-oriented computing, evolutionary computing, mobile computing, computational statistics, engineering computing, multimedia networking and computing, applications and other forms of computation problems in various scientific disciplines and engineering. Information computing and applications is an important underpinning for techniques used in information and computational science and there are many unresolved problems that address worth

studying. A classic work in political philosophy, intellectual history and economics, *The Road to Serfdom* has inspired and infuriated politicians and scholars for half a century. Originally published in 1944, it was seen as heretical for its passionate warning against the dangers of state control over the means of production. For Hayek, the collectivist idea of empowering government with increasing economic control would lead not to a utopia but to the horrors of Nazi Germany and Fascist Italy. This new edition includes a foreword by series editor and leading Hayek scholar Bruce Caldwell explaining the book's origins

and publishing history and assessing common misinterpretations of Hayek's thought. Caldwell has also standardized and corrected Hayek's references and added helpful new explanatory notes. Supplemented with an appendix of related materials and forewords to earlier editions by the likes of Milton Friedman, and Hayek himself, this new edition of *The Road to Serfdom* will be the definitive version of Friedrich Hayek's enduring masterwork. *International Documents on Environmental Liability* brings together 30 official full-text documents in the field of international environmental liability into an easily

accessible, practical handbook; details the work of the International Law Commission on this topic; and provides the latest versions of international liability conventions and their statuses - including the latest on: (1) 2003 UNECE Kyiv Liability Protocol; (2) 2004 EC Directive on Environmental Liability; (3) 2005 Antarctica Liability Annex. The authors' combined capacity as an academic, policy advisor, and practitioner have helped bring forth a publication that reflects their experience of being involved in the development, negotiations and implementation of environmental liability regimes at both an international and

European level. This three-book set constitutes the refereed proceedings of the Second International Conference on Recent Trends in Image Processing and Pattern Recognition (RTIP2R) 2018, held in Solapur, India, in December 2018. The 173 revised full papers presented were carefully reviewed and selected from 374 submissions. The papers are organized in topical sections in the three volumes. Part I: computer vision and pattern recognition; machine learning and applications; and image processing. Part II: healthcare and medical imaging; biometrics and applications. Part III: document image

analysis; image analysis in agriculture; and data mining, information retrieval and applications. The International Conference on Text, Speech, and Dialogue 2005, the 8th event in the series on Text, Speech, and Dialogue, which originated in 1998, presented state-of-the-art technology and recent achievements in the field of natural language processing. It declared its intent to be an interdisciplinary forum, intertwining research in speech and language processing with its applications in everyday practice. We feel that the mixture of different approaches and applications offered a great opportunity to get acquainted with the current

activities in all aspects of language communication and to witness the amazing vitality of researchers from developing countries too. The financial support of the ISCA (International Speech Communication Association) enabled the wide attendance of researchers from all active regions of the world. This year's conference was partially oriented towards multi-modal human-computer interaction (HCI), which can be seen as the most attractive topic of HCI at the present time. In this way, we are involved in a rich complex of communicative activity, facial expressions, hand gestures, direction of gaze, to name but the most obvious ones. The

interpretation of each user utterance depends on the context, prosody, facial expressions (e. g. brows raised, brows and gaze both raised) and gestures. Hearers have to adapt to the speaker (e. g. maintaining the theme of the conversation, smiling etc. ). Research into the interaction of these channels is however limited, often focusing on the interaction between a pair of channels. Six significant scientific results achieved in this area in the USA, Japan, Switzerland, Germany, The Netherlands, and the Czech Republic were presented by keynote speakers in special plenary sessions. Further, approx. This book provides a

systematic review of many advanced techniques to support the analysis of large collections of documents, ranging from the elementary to the profound, covering all the aspects of the visualization of text documents. Particularly, we start by introducing the fundamental concept of information visualization and visual analysis, followed by a brief survey of the field of text visualization and commonly used data models for converting document into a structured form for visualization. Then we introduce the key visualization techniques including visualizing document similarity, content, sentiments, as well as

text corpus exploration system in details with concrete examples in the rest of the book. This 1931 volume includes key documents relating to Catherine II of Russia. An introduction and notes are provided, together with a chronological table covering events between 1762 and 1777. This book will be of value to anyone with an interest in Catherine's reign, Russian history, and eighteenth-century history in general. This book features a collection of high-quality, peer-reviewed papers presented at the Third International Conference on Intelligent Computing and Communication (ICICC 2019) held at the

School of Engineering, Dayananda Sagar University, Bengaluru, India, on 7 – 8 June 2019. Discussing advanced and multi-disciplinary research regarding the design of smart computing and informatics, it focuses on innovation paradigms in system knowledge, intelligence and sustainability that can be applied to provide practical solutions to a number of problems in society, the environment and industry. Further, the book also addresses the deployment of emerging computational and knowledge transfer approaches, optimizing solutions in various disciplines of science, technology and

healthcare. Chapter 7. Case Study : Comparing Twitter Archives; Getting the Data and Distribution of Tweets; Word Frequencies; Comparing Word Usage; Changes in Word Use; Favorites and Retweets; Summary; Chapter 8. Case Study : Mining NASA Metadata; How Data Is Organized at NASA; Wrangling and Tidying the Data; Some Initial Simple Exploration; Word Co-occurrences and Correlations; Networks of Description and Title Words; Networks of Keywords; Calculating tf-idf for the Description Fields; What Is tf-idf for the Description Field Words?; Connecting Description Fields to

Keywords; Topic Modeling. C.1  
ST. AID B & T. 09-14-2007.  
\$18.95. Comprehensive  
Coverage of the Entire Area of  
Classification Research on the  
problem of classification tends  
to be fragmented across such  
areas as pattern recognition,  
database, data mining, and  
machine learning. Addressing  
the work of these different  
communities in a unified way,  
Data Classification: Algorithms  
and Applications explores the  
underlying algorithms of  
classification as well as  
applications of classification in  
a variety of problem domains,  
including text, multimedia,  
social network, and biological  
data. This comprehensive book  
focuses on three primary

aspects of data classification:  
Methods-The book first  
describes common techniques  
used for classification,  
including probabilistic  
methods, decision trees, rule-  
based methods, instance-based  
methods, support vector  
machine methods, and neural  
networks. Domains-The book  
then examines specific methods  
used for data domains such as  
multimedia, text, time-series,  
network, discrete sequence,  
and uncertain data. It also  
covers large data sets and data  
streams due to the recent  
importance of the big data  
paradigm. Variations-The book  
concludes with insight on  
variations of the classification  
process. It discusses

ensembles, rare-class learning,  
distance function learning,  
active learning, visual learning,  
transfer learning, and semi-  
supervised learning as well as  
evaluation aspects of  
classifiers.
