The management of soft-tissue neoplasms has always had an aura of mystique due to the relative rarity of these lesions in comparison to the more common cancers occurring in man. There are many variations in technique of the operations employed for these tumors as well. In this volume we have illustrated our own personal preferences in approach to soft tissue sarcomas with the hope it will serve as a useful guide to the surgeon who is faced with one or more of these problems. None of the operations depicted in this manual are original with us but they are procedures and approaches we have found effective for the clinical management of this family of tumors. In presenting this volume we wish to acknowledge our gratitude to our surgical teachers, our present and past associates in surgical oncology, our colleagues in the other oncologic disciplines, and our patients whose treatment is illustrated herein. We are indebted to Dr. Saul Kay, Professor of Pathology, and Dr. James Walsh, Associate Professor of Radiology, for providing

the illustrations of histopathology and radiologic imaging in the early chapters. We particularly appreciate the superb artwork of our enthusiastic teammates, Trudy Nicholson and Jane Hurd, as their contribution is the crux of our endeavor. Walter Lawrence Jr., M.D. James P. The Royal Family of the United Kingdom is one of the most instantly recognized institutions in the world. Since the current monarch, Queen Elizabeth II, was crowned in 1952, it has undergone a huge amount of cultural and social change, but over the course of many decades the Royal Family has continued to play an important role in British society. The Royal Family Operations Manual, written by royal expert and correspondent Robert Jobson, offers a complete examination of a very British institution, looking behind the scenes at the current heirs of a kingdom that has been ruled nearly uninterruptedly by a monarch since 774AD. Chapters include explanations of the: Windsor bloodline, family tree and personalities Their royal residences, palaces and country retreats Military connections Charity work Annual engagements Royal finances, including facts and statistics on personal incomes, state salaries and business interests Births, marriages and deaths State ceremonies, such as the opening of parliament, the Christmas address, trooping the colours and the elaborate hosting of foreign dignitaries. The book also includes throughout fascinating behind the scenes details on staff, domestic rituals, personalities, pets, family gatherings and other inside information. Lavishly illustrated with photographs of the people, places and events of the past 150 years, this book makes a fitting celebration of Queen Elizabeth II's reign as she nears 70 years on the throne. This book tackles in details all aspects of project control and provides - through comprehensive and tabulated data, methods, formulas, exercises, templates, charts, figures, etc.- to project/site managers, engineers, and accountants the necessary data and guidance they need for performing their works. It highlights also the detrimental behavior and pitfalls that hinder the successful completion of projects. It covers, in addition to Cost Control which forms the core element of this book, a wide range of other project activities - organizational matters; compliance with policies and regulations; contractual matters with client

and others; construction schedules of permanent and temporary works; receipt dates of construction sites and drawings; procurement of resources; quality of works; safety and environment, etc. The project control system handled in this book allows to get, at any performance evaluation date of the project, an accurate picture of the project operations for the current, elapsed construction period of the project up to this date (current report), and also, based on the current, gained output data of the operations, a projected evaluation of the project operations covering the period up to project completion (projected report). Each of the current and the projected reports of the project provides, at each performance evaluation date, for each item to be controlled, a comparison between its actual/projected and budgeted data. The items that have to be controlled, depending on the adopted control system, can cover all aspects of the project operations such as progress of works, costs, unit cost of the labor working-hour, labor-hours consumption per unit of work, material consumption per unit of work, unit costs of materials, unit costs of subcontracted items, cost of temporary site installations, cost of construction equipment and plant, cost of staff, execution period of the project, delay, quantities and qualities of the works, saving/loss cost of lump-sum projects resulted from inexact quantities takeoff of the project works and/or inaccurate interpretation of specifications and contract conditions, value of executed works, variations and additional works, amounts invoiced, amounts received, amounts claimed, supply of drawings approved for construction, amounts and periods of bank guarantees, compliance with policies and regulations, compliance with safety and environment regulations, and many others. The actual/projected status of each item to be controlled is exhibited either as (1) a comparison between its budgeted and actual/projected data and or (2) as a ratio or quotient of its actual/projected and budgeted data (called performance index "PI"). A PI value equals to 1 indicates that the evaluated task has been executed or is expected to be executed as it was foreseen in the estimate/budget or in the planning (on target performance). A PI value smaller than 1 (except for the project value,

quantity of works, income, profit/loss, and others not expended items) indicates that the task has been executed or is expected to be executed with a performance better than what was foreseen in the estimate/budget or in the planning (good performance). A PI value greater than 1 (except for the items listed above) indicates a poor performance of the task. The performance indexes, selected for the project control, could be computed by means of a computer program. The input-data required for this program will be fed by the site management and other units of the project organization. These performance indexes allow the general management, the area management, the operations management, the project/site management, and other management levels to identify, at a glance, the items whose actual output data exceed, equal, or less than the budgeted ones. Filled with procedures for successfully managing construction operations, this work features over 300 pages of methods, strategies and tactics, forms and ready-to-copy letters all laid out in a concise, easy-to-grasp style. Devoted to the design-build process, it also offers coverage of the advances in claims and dispute resolution.
