Passage to Faith Jul 08 2021
Passage to Faith is Book 1 in The Faith Today Trilogy series. Passage to Faith explores current scientific evidence supporting the case for the existence of a creator God. It draws on dozens of historical testimonies of individuals who had encounters with a Supreme Being which influenced them to change their lives, and sometimes the world, for the better. Taking the reader on an evidence-based tour through the cosmos, Lee, qualified in the fields of the philosophy of futures studies, theology, literature and education, reveals a stunning degree of indwelling intelligence and beauty on display throughout

the universe and on Earth. He then traces the common ground between the creation account in Genesis in the Bible and scientific cosmology, the Big Bang theory and Albert Einstein's theory of relativity. Lee discusses the faith of a wide range of people from different eras and disciplines to reinforce the conviction that God's redeeming power actively intervenes not just in nature but in history. These examples include, among others, figures from history like Joan of Arc, Nelson Mandela and Barack and Michelle Obama, scientists and mathematicians like Copernicus, Galileo, Kepler, Newton, Faraday, Mendel,

Pasteur, Pascal, George Washington Carver, Dr Wernher von Braun, Professor Christiaan Barnard and Francis S. Collins, missionaries like John Wesley, Mother Theresa, Dr David Livingstone, Dr Albert Schweitzer, and Jackie Pullinger, singers, entertainers, and actors such as Bob Dylan, Johnny Cash, Jim Reeves, Glen Campbell, Alice Cooper, Gary Cooper, John Wayne, Alfred Hitchcock, Mark Wahlberg, Mel Gibson, Sylvester Stallone, and Bear Grylls, men and women from the sports arena like George Foreman, Novak Djokovic, Simona Halep, Margaret Court and Siya Kolisi, as well as astronauts such as Dr Buzz Aldrin, David Randolph

Scott and Gene Cernan.

Hybrid Vehicles Apr 17 2022
The fast growth in world
population and the associated
energy requirements, the
announced depletion of fossil
fuel resources, the continuing
rise in greenhouse gas (GHG)
emissions with the induced
climatic changes represent
some of the major challenges to
be taken up in the coming
years and decades.

Hybridization therefore
typically represents a transition
technology which can
significantly improve the
energy and environmental
performance of current
vehicles, without radically
changing their use typologies,
while opening the way to new
propulsion modes for the
longer term. It is nevertheless
a complex subject requiring a
multidisciplinary approach.
This book, which is intended to
be exhaustive, considers the
vehicle, its components, their
association and their control,
as well as the global balances
determined over the vehicle
lifetime. It starts with a general
presentation of the various
conditions of use of vehicles, to

give readers an understanding
of the stakes related to the
development of hybrid vehicles
and the methods used to
compare the performance of
the various solutions. The
principles and the various
types of internal combustion
engine and electrical drives,
onboard energy storage
systems, principles,
architectures, specific
components and operation of
hybrid drivetrains, as well as
the energy management in
these vehicles, are developed.
A global analysis of the various
drivetrains life cycle
assessment (LCA), total costs
and availability of sensitive
materials is also provided. This
book is intended for everyone

involved in the design, manufacture and implementation of hybrid drive vehicles and their components. It will also be of interest to students, teachers and researchers wishing to acquire or further their knowledge in all fields impacted by drivetrain electrification. More globally, after consulting this book, readers will be in a position to evaluate the technologies related to the concept of drivetrain hybridization, their implementation, balances and generalization conditions. This book is available in French Under the title "Véhicules hybrides". Contents : 1. Vehicle use. 2. Internal combustion engines. 3. Electric drivetrain.

4. On-board energy storage systems. 5. Hybridization. 6. Control of hybrid vehicles. 7. Comparative study of hybrid vehicles: greenhouse gas emissions, energy consumption, and cost. Appendixes.

Admiralty Aug 29 2020 This new casebook, written in "stand alone" fashion for maximum customization by instructors, provides a pragmatic look at contemporary admiralty practice as well as a solid

foundation for students contemplating a maritime law career. In assembling the text, the authors have drawn from a mix of older and newer cases, edited with a light touch, and even added touches of humor and references to popular culture. They also have: incorporated generous amounts of material from "emerging" areas of admiralty practice (such as cruise ship and pleasure boat claims); given equal time to "brown water" and "blue water" issues; devoted considerable attention to professional ethics; prepared chapter overviews, extensive notes, numerous cites to secondary sources, and a comprehensive index to help

guide students through the readings; included in each of the book's 62 sections a challenging problem (as well as a "citing" decision) to stimulate classroom discussion; and written a highly-detailed teacher's manual (available only to professors) that will aid both new and experienced instructors.

Nineteenth Century Collections Online: European Literature, 1790-1840: The Corvey Collection includes the full-text of more than 9,500 English, French and German titles. The collection is sourced from the remarkable library of Victor Amadeus, whose Castle Corvey collection was one of the most

spectacular discoveries of the late 1970s. The Corvey Collection comprises one of the most important collections of Romantic era writing in existence anywhere -- including fiction, short prose, dramatic works, poetry, and more -- with a focus on especially difficult-to-find works by lesser-known, historically neglected writers. The Corvey library was built during the last half of the 19th century by Victor and his wife Elise, both bibliophiles with varied interests. The collection thus contains everything from novels and short stories to belles lettres and more populist works, and includes many exceedingly rare works not available in any other collection

from the period. These invaluable, sometimes previously unknown works are of particular interest to scholars and researchers. European Literature, 1790-1840: The Corvey Collection includes: * Novels and Gothic Novels * Short Stories * Belles-Lettres * Short Prose Forms * Dramatic Works * Poetry * Anthologies * And more Selected with the guidance of an international team of expert advisors, these primary sources are invaluable for a wide range of academic disciplines and areas of study, providing never before possible research opportunities for one of the most studied historical periods. Diesel and Gasoline Engines

Feb 15 2022 The internal combustion engine was invented around 1790 by various scientists and engineers worldwide. Since then the engines have gone through many modifications and improvements. Today, different applications of engines form a significant technological importance in our everyday lives, leading to the evolution of our modern

civilization. The invention of diesel and gasoline engines has definitely changed our lifestyles as well as shaped our priorities. The current engines serve innumerable applications in various types of transportation, in harsh environments, in construction, in diverse industries, and also as back-up power supply systems for hospitals, security departments, and other institutions. However, heavy duty or light duty engines have certain major disadvantages, which are well known to everyone. With the increasing usage of diesel and gasoline engines, and the constantly rising number of vehicles worldwide, the main concern

nowadays is engine exhaust emissions. This book looks at basic phenomena related to diesel and gasoline engines, combustion, alternative fuels, exhaust emissions, and mitigations.

Handbook of Rubber Bonding

Dec 13 2021 Annotation. Many books and papers have been published on adhesion of materials in general but the topics covered by this book have been selected to cover a wide range of interests, both in terms of products and applications. Although there is some discussion of relevant theory in various sections of d104, the emphasis in this volume has been to concentrate on the

practicalities of bonding of rubbers, to themselves and substrates. It is considered that

this type of information is of immediate interest to the practising technologist dealing

with shop floor problems on a daily basis.
