"The goal of this text is to relate the fundamental concepts of general, organic, and biological chemistry to the world around us, and in this way illustrate how chemistry explains many aspects of everyday life. This text is different-by design. Since today's students rely more heavily on visual imagery to learn than ever before, this text uses less prose and more diagrams and figures to reinforce the major themes of chemistry. A key feature is the use of molecular art to illustrate and explain common phenomena we encounter every day. Each topic is broken down into small chunks of information that are more manageable and easily learned. Students are given enough detail to understand basic concepts, such as how soap cleans away dirt and why trans fats are undesirable in the diet, without being

overwhelmed. This textbook is written for students who have an interest in nursing, nutrition, environmental science, food science, and a wide variety of other health-related professions. The content of this book is designed for an introductory chemistry course with no chemistry prerequisite, and is suitable for either a two-semester sequence or a one-semester course. I have found that by introducing one new concept at a time, keeping the basic themes in focus, and breaking down complex problems into small pieces, many students in these chemistry courses acquire a new appreciation of both the human body and the larger world around them"-- You've got questions... and in this book, 200 of the world's most intriguing questions are settled once and for all (or maybe not) through infographics. Celebrate the highs-- and the low-- of our achievements; learn the answers to some of the questions that have long vexed humanity; and discover that people across the world have detailed, tallied, and questioned everything from every sighting of the Loch Ness monster to which country has the most chickens per capita. -- adapted from back cover and perusal of book

There is something strange about Coraline's new home. It's not the mist, or the cat that always seems to be watching her, nor the signs of danger that Miss Spink and Miss Forcible, her new neighbours, read in the tea leaves. It's the other house - the one behind the old door in the drawing room. Another mother and father with black-button eyes and papery skin are waiting for Coraline to join them there. And they want her to stay with them. For ever. She knows that if she ventures through that door, she may never come back. This introductory text remains focused on the essentials necessary for success in General Chemistry. *Introduction to Chemistry Principles* focuses on the most important topics - omitting organic and biochemistry chapters - and teaches the problem-solving skills students need. Each topic is introduced and developed step by step until reaching the level of sophistication required for further course work. The edition includes Bram Stoker's masterpiece *Dracula* his other gothic horror classics, as well as his adventure and romance novels: *Dracula* *The Snake's Pass* *The Watter's Mou'* *The Mystery of the Sea* *The Jewel of Seven Stars* *The Man (The Gates of Life)* *The Lady of the Shroud* *The Lair of the White Worm (The Garden of Evil)* *The Primrose Path* *The Shoulder of Shasta* *Lady Athlyne* *Miss Betty* *Bram Stoker (1847-1912)* was an Irish author, best remembered as the author of the influential horror novel *Dracula*. The perfect way to prepare for exams, build problem-solving skills, and get the grade you want! This useful resource reinforces skills with activities and practice problems for each chapter. With a stunning new cover look, King's chilling classic of a small New England town about to be engulfed in terror. Turn off the television - in fact, why don't you turn off all the lights except for the one over your favourite chair? - and we'll talk about vampires here in the dim. I think I can make you believe in them. Stephen King, from the Introduction. 'Salem's Lot is a small New England town with the usual quota of gossips, drinkers, weirdos and respectable folk. Of course there are tales of strange happenings - but not more than in any other town its size. Ben Mears, a moderately successful writer, returns to the Lot to write a novel based on his early years, and to exorcise the terrors that have haunted him since childhood. The event he witnessed in the house now rented by a new resident. A newcomer with a strange allure. A man who causes Ben some unease as things start to happen: a child disappears, a dog is brutally killed - nothing unusual, except the list starts to grow. Soon surprise will turn to bewilderment, bewilderment to confusion and finally to terror. . .
