This book constitutes the refereed proceedings of the First International Conference on Intelligent Cloud Computing, ICC 2019, held in Riyadh, Saudi Arabia, in December 2019. The two-volume set presents 53 full papers, which were carefully reviewed and selected from 174 submissions. The papers are organized in topical sections on Cyber Security; Data Science; Information Technology and Applications; Network and IoT. This little gem is the fourth edition of the catalogue to Suddenly This Overview, the influential Fischli & Weiss exhibition of unfired clay objects which took place in December and January of 1981 and 82. That exhibition represented the first major collaboration between the artists, who have since become two of the most influential figures on the international scene. In this pocket-sized volume, the small, very hand-made-looking clay sculptures are reproduced in low-tech black-and-white and accompanied by the amusing descriptive captions with which they were originally exhibited. Thus a little man on a bicycle comes with the caption, "Dr. Hoffmann on the first LSD trip," while two figures walking along a sidewalk with guitars are described, "Mick Jagger and Brian Jones going home satisfied after composing 'I can't get no satisfaction.'" Classic. This book highlights recent research advances on biometrics using new methods such as deep learning, nonlinear graph embedding, fuzzy approaches, and ensemble learning. Included are special biometric technologies related to privacy and security issues, such as cancellable biometrics and soft biometrics. The book also focuses on several emerging topics such as big data issues, internet of things, medical biometrics, healthcare, and robot-human interactions. The authors show how these new applications have triggered a number of new biometric approaches. They show, as an example, how fuzzy extractor has become a useful tool for key generation in biometric banking, and vein/heart rates from medical records can also be used to identify patients. The contributors cover the topics, their methods, and their applications in depth. From the folks behind the software, this book's step-by-step, project-based lessons, complemented by review questions at the end of each chapter and a CD filled with lesson and media files, will have readers editing, organizing, sharing, and storing all of their digital images in no time. This book provides a definitive account of Jacques Derrida's involvement in debates about the university. Derrida was a founding member of the Research Group on the Teaching of Philosophy (GREPH), an activist group that mobilized opposition to the Giscard government's proposals to "rationalize" the French educational system in 1975. He also helped to convene the Estates General of Philosophy, a vast gathering in 1979 of educators from across France. Furthermore, he was closely associatedwith the founding of the International College of Philosophy in Paris, and his connection with the International Parliament of Writers during the 1990s also illustrates his continuing interest in the possibility of launching an array of literary and philosophical projects while experimenting with new kinds of institutions in which they might take their specific shape and direction. Derrida argues that the place of philosophy in the university should be explored as both a historical questionand a philosophical problem in its own right. He argues that philosophy simultaneously belongs and does not belong to the university. In its founding role, it must come from "outside" the institution in which, nevertheless, it comes to define itself. The author asks whether this irresolvable tension between "belonging" and "not belonging" might not also form the basis of Derrida's political thinking and activism where wider issues of contemporary significance are concerned. Key questions today concerning citizenship, rights, the nation-state and Europe, asylum, immigration, terror, and the "return" of religion all involve assumptions and ideas about "belonging"; and they entail constitutional, legal, institutional and material constraints that take shape precisely on the basis of such ideas. This project will therefore open up a key question: Can deconstruction's insight into the paradoxical institutional standing of philosophy form the basis of a meaningful political responseby "theory" to a number of contemporary international issues? Which is not too difficult to understand since Goedicke is one of the greatest living exponents of the "Western Tradition" in Russia. The word "etude" which ordinarily connotes a dry-as-dust study is qualified with the word "concert" by the composer. It follows along the lines of the chopin etudes for piano which have always been used both as study and concert material. The opening theme has the light, airy character of a Mozart rondo or Mendelssohn scherzo. The secondary theme, which appears at (5), is in direct contrast and has broad, flowing lines. The tonguings should all be soft and the player should take short breaths so that all the notes will appear connected. B-Flat Trumpet (cornet) and piano. No field is changing more rapidly than Neurology, and all Neurologists have an increasing responsibility to use this information to help devise meaningful therapeutic strategies for the patients. To help achieve this goal, several areas for in-depth discussions are selected. The rapid advances in the muscular dystrophies is addressed with specific emphasis as to how these genetic breakthroughs will impact the therapy of these disorders in the future. Also discussed is therapeutic Neuro-ophthalmology which has always been of clinical importance for importance for Neurologists. Finally, the problem of pain is extremely important, and the latest understanding of neuropeptides and neuronal re-organization are discussed as the basis for future therapeutic approaches. Humans are unique in that they expend considerable effort and ingenuity in disposing of the dead. Some of the recognisable ways we do this are visible in the Palaeolithic archaeology of the Ice Age. The Palaeolithic Origins of Human Burial takes a novel approach to the long-term development of human mortuary activity – the various ways we deal with the dead and with dead bodies. It is the first comprehensive survey of Palaeolithic mortuary activity in the English language. Observations in the modern world as to how chimpanzees behave towards their dead allow us to identify 'core' areas of behaviour towards the dead that probably have very deep evolutionary antiquity. From that point, the palaeontological and archaeological records of the Pliocene and Pleistocene are surveyed. The core chapters of the book survey the mortuary activities of early hominins, archaic members of the genus Homo, early Homo sapiens, the Neanderthals, the Early and Mid Upper Palaeolithic, and the Late Upper Palaeolithic world. Burial is a striking component of Palaeolithic mortuary activity, although existing examples are odd and this probably does not reflect what modern societies believe burial to be, and modern ways of thinking of the dead probably arose only at the very end of the Pleistocene. When did symbolic aspects of mortuary ritual evolve? When did the dead themselves become symbols? In discussing such questions, The Palaeolithic Origins of Human Burial offers an engaging contribution to the debate on modern human origins. It is illustrated throughout, includes up-to-date examples from the Lower to Late Upper Palaeolithic, including information hitherto unpublished. Examines chivalry in the context of the Middle Ages This authoritative and comprehensive handbook is the definitive work on the current state of the art of Biometric Presentation Attack Detection (PAD) – also known as Biometric Anti-Spoofing. Building on the success of the previous, pioneering edition, this thoroughly updated second edition has been considerably expanded to provide even greater coverage of PAD methods, spanning biometrics systems based on face, fingerprint, iris, voice, vein, and signature recognition. New material is also included on major PAD competitions, important databases for research, and on the impact of recent international legislation. Valuable insights are supplied by a selection of leading experts in the field, complete with results from reproducible research, supported by source code and further information available at an associated website. Topics and features: reviews the latest developments in PAD for fingerprint biometrics, covering optical coherence tomography (OCT) technology, and issues of interoperability; examines methods for PAD in iris recognition systems, and the application of stimulated pupillary light reflex for this purpose; discusses advancements in PAD methods for face recognition-based biometrics, such as research on 3D facial masks and remote photoplethysmography (rPPG); presents a survey of PAD for automatic speaker recognition (ASV), including the use of convolutional neural networks (CNNs), and an overview of relevant databases; describes the results yielded by key competitions on fingerprint liveness detection, iris liveness detection, and software-based face anti-spoofing; provides analyses of PAD in fingerprint recognition, online handwritten signature verification, and in biometric technologies on mobile devicesincludes coverage of international standards, the E.U. PSDII and GDPR directives, and on different perspectives on presentation attack evaluation. This text/reference is essential reading for anyone involved in biometric identity verification, be they students, researchers, practitioners, engineers, or technology consultants. Those new to the field will also benefit from a number of introductory chapters, outlining the basics for the most important biometrics. Don't let your indie film be sabotaged by bad sound! By Bike around Bando and Chichibu records the progress of a trip along the Bando and Chichibu Buddhist pilgrim trails on a folding bike. The trip was the fourth of such travels with journeys along the O-Shikoku, the Saigoku and the Chugoku pilgrim paths preceding it. The Bando pilgrimage starts in Kamakura and traverses around and through Tokyo, past Mt Tsukuba and ending up on the Boso Peninsula east of Tokyo Bay. The Chichibu is a compact pilgrim path through Saitama Prefecture. Both routes pass through areas of rural Japan where non-Japanese tourists rarely penetrate. The text is supported by many colour photos of the route and maps showing the locations passed. Entity resolution is an essential tool in processing and analyzing data in order to draw precise conclusions from the information being presented. Further research in entity resolution is necessary to help promote information quality and improved data reporting in multidisciplinary fields requiring accurate data representation. Innovative Techniques and Applications of Entity Resolution draws upon interdisciplinary research on tools, techniques, and applications of entity resolution. This research work provides a detailed analysis of entity resolution applied to various types of data as well as appropriate techniques and applications and is appropriately designed for students, researchers, information professionals, and system developers. Photoshop is a graphics tool for video professionals engaged in making graphics for use in television, motion graphics, podcasting and DVD. Presentations and hands-on tutorials demonstrate the fundamental concepts and techniques for combining still and moving images. Featuring contributions from leading international academics and practitioners, Credit Risk: Models, Derivatives, and Management illustrates how a risk management system can be implemented through an understanding of portfolio credit risks, a set of suitable models, and the derivation of reliable empirical results. Divided into six sections, the book • Explores the rapidly developing area of credit derivative products, including iTraxx Futures, iTraxx Default Swaptions, and constant proportion debt obligations • Addresses the relationships between the DJ iTraxx credit default swap (CDS) index and the stock market as well as CDS spreads and macroeconomic factors • Investigates systematic and firm-specific default risk factors, compares CDS pricing results from the CreditGrades industry benchmark to a trinomial tree approach, and applies the Hull–White intensity-based model to the pricing of names from the CDX index • Analyzes aggregate default and recovery rates on corporate bond defaults over a twenty-year period, the responses of hazard rates to changes in a set of economic variables, low-default portfolios, and tests on the accuracy of the Basel II framework • Describes benchmark models of implied credit correlation risk, copula-based default dependence concepts, the fit of various copula models, and a common factor model of systematic credit risk • Studies the pricing of options on single-name CDSs, the pricing of credit derivatives, collateralized debt obligation (CDO) price data, the pricing of CDO tranches, applications of Gaussian and Student's t copula functions, and the pricing of CDOs Using mathematical models and methodologies, this volume provides the essential knowledge to properly manage credit risk and make sound financial decisions. Offers a detailed look at the film actor and singer's life by his daughter Biometric Systems provides practitioners with an overview of the principles and methods needed to build reliable biometric systems. It covers three main topics: key biometric technologies, design and management issues, and the performance evaluation of biometric systems for personal verification/identification. The four most widely used technologies are focused on - speech, fingerprint, iris and face recognition. Key features include: in-depth coverage of the technical and practical obstacles which are often neglected by application developers and system integrators and which result in shortfalls between expected and actual performance; and protocols and benchmarks which will allow developers to compare performance and track system improvements. Illuminating the significance of De Staebler's practice as never before, this book analyzes the artist's major pieces. After backpacking her way around India, 21-year-old Sarah Macdonald decided that she hated this land of chaos and contradiction with a passion, and when an airport bagger read her palm and insisted she would come back one day - and for love - she vowed

never to return. But twelve years later the prophecy comes true when her partner, ABC's South Asia correspondent, is posted to New Delhi, the most polluted city on earth. Having given up a blossoming radio career in Sydney to follow her new boyfriend to India, it seems like the ultimate sacrifice and it almost kills Sarah - literally. After being cursed by a sadhu smeared in human ashes, she nearly dies from double pneumonia. It's enough to send a rapidly balding atheist on a wild rollercoaster ride through India's many religions in search of the meaning of life and death. From the 'brain enema' of a meditation retreat in Dharamsala to the biggest Hindu festival on earth on the steps of the Ganges in Varanasi, and with the help of the Dalai Lama, a goddess of healing hugs and a couple of Bollywood stars - among many, many others - Sarah discovers a hell of a lot more.
