Automotive Electricity Apr 28 2020 Since the beginning of the century, electrical goods have invaded our everyday lives. Now, electric power is coming to be seen as a solution to the pollution caused by cars.

While this transition has remained very slow during the last ten years, it has been accelerating as the statutory constraints and needs of the market have changed. Even if the electric car itself fails to dominate the market, electric traction is taking an important place in our drive to move away from gas-powered vehicles. Another solution, hybrid vehicles, combine two sources of energy (electric and chemical), reducing the global consumption of fossil fuels. Fuel cell vehicles are also one of the most promising technologies for the future, with the capacity to use any fuel - hydrogen being the ideal fuel ecologically, but constrained by infrastructure and storage issues. This book explores all these different solutions for moving our vehicles from fossil fuel consumption to new, more environmentally-friendly power sources.

The Wide Lens Sep 01 2020 How can great companies do everything right - identify real customer needs, deliver excellent innovations, beat their competitors to market - and still fail? The sad truth is that many companies fail because they focus too intensely on their own innovations, and then neglect the innovation ecosystems on which their success depends. In our increasingly interdependent world, winning requires more than just delivering on your own promises. It means ensuring that a host of partners -some visible, some hidden- deliver on their promises, too. In *The Wide Lens*, innovation expert Ron Adner draws on over a decade of research and field testing to take you on far ranging journeys from Kenya to California, from transport to telecommunications, to reveal the hidden structure of success in a world of interdependence. A riveting study that offers a new perspective on triumphs like Amazon's e-book strategy and Apple's path to market dominance; monumental failures like Michelin with run-flat tires and Pfizer with inhalable insulin; and still unresolved issues like electric cars and electronic health records, *The Wide Lens* offers a powerful new set of frameworks and tools that will multiply your odds of innovation success. *The Wide Lens* will change the way you see, the way you think - and the way you win.

The Spec Set Jan 24 2020 Acquiring god-like power isn't difficult. It's wielding it that courts disaster. Copernicus Science camp looks harmless enough on the surface, at least no one will tell you otherwise, least of all Max McKenzie, who doesn't speak at all. He can't even defend himself when he's implicated in a high stakes chemical theft from the camp lab. Or can he? His brother Emile is desperate to help, but he's waking up to his own problems--chief among them the fact that he's developed an incredible (and incredibly dangerous) new ability. He doesn't know how to control his awesome new power, and turns to the one person he's loathe to ask: Lilly Fang. Lilly has everything under control, including other people's biochemistry. (Or is Emile really that crazy about her?) Either way, she's hiding a boat-load of secrets (and secret powers). Lilly assembles a team of friends like none Emile's ever dreamed of to help Max. There's Fetu, a near giant, whose presence alone seems to suck the air out of the room. Or does he do that literally? And Danika, who's so shy she seems to fade right into the background. Or does she actually become invisible? And Eliza, who never lifts a finger--but is that because she lifts things with her mind? The Spec Set will need all of their combined strengths (and their weaknesses) to combat a threat reaching all the way go to another universe.

The Automotive Industry and the Environment Oct 03 2020 The automotive industry currently faces huge challenges. The fundamental technological paradigm it relies on, volume production, has become progressively more unprofitable in the face of increasingly segmented niche markets. At the same time it faces increasing regulatory and social pressures to improve both the sustainability of its products and methods of production. Building on a wealth of research, The automotive industry and the environment addresses those challenges and how they can be met in producing a sustainable and profitable industry for the future. The authors first discuss the development of the

automotive industry and the problems it currently faces. They then consider the solutions the industry can adopt. The book reviews trends in more environmentally-friendly technologies such as the use of more sustainable fuel sources and new types of modular design with built-in recyclability. However, these technologies can only be fully exploited if methods of manufacture change. The book also describes models of decentralised production, particularly the micro factory retailing (MFR) model, which provide an alternative to volume production and promise to be both more sustainable and more profitable. The automotive industry and the environment provides both a cogent diagnosis of the environmental and other problems facing the industry and a blueprint for a better future. It will be widely welcomed by the industry, policy makers and all those concerned with sustainable transport. Addresses the challenges facing the automotive industry, from the increasing unprofitability of volume production to regulatory and social pressures to improve environmental and product sustainability Examines how the automotive industry can meet the current challenges in producing a sustainable and profitable industry for the future Reviews trends in more environmentally-friendly technologies such as the use of more sustainable fuel sources and new types of modular design with built-in recyclability
