This book comprises an integrated review of ocular therapeutics across all relevant fields. It addresses the real-world requirements of ophthalmologists, pharmacists and optometrists, as observed through working alongside these practitioners for two decades. Knowledge surrounding agents used in ophthalmic practice has, historically, been scattered. The book facilitates understanding of ocular drug therapy by compiling all key aspects of the pharmacology, toxicology, pharmaceutical science, ocular biochemistry and cell biology of these agents. Chapters detail drug transfer across barriers, systemic toxicity of topically applied drugs, autonomic drugs used for diagnostics, as well as anti-inflammatory, antiallergic, glaucoma and antimicrobial therapies, and avenues for the development of new ocular drugs. Applications of extemporaneously prepared formulations are described to inform day-to-day clinical practice. The use of mucoadhesive polymers in tear substitutes, ocular drug delivery systems, stem cell therapy, pharmacogenomics and antiangiogenic ocular chemotherapy are also explored. The book also provides insights from drugs of herbal origin, and a historical perspective on drugs for ocular use. Practicing and resident ophthalmologists, optometrists, pharmacists, nursing professionals, scholars in ocular drug research and students will equally benefit from this comprehensive guide. Basic research on the pharmacology of itch has exploded in the wake of two very influential papers that were published in *Nature* (2007) and *Science* (2009). Long overlooked as a milder form of pain, itching has rapidly gained a new appreciation in both research and clinical communities because of its complexity and its negative effects on the quality of life of the distressed patients. Like pain, not all itches are the same. Unlike pain, there are no standard drugs equivalent to aspirin and morphine. Epidemiological studies emphasize the high incidence and economic costs of itch (pruritus). It is the most prevalent symptom of a wide variety of allergic and inflammatory skin conditions (e.g., psoriasis, atopic

dermatitis), is associated with several systemic diseases (e.g., chronic kidney and liver disease), and occurs in patients undergoing hemodialysis, spinal administration of opioids, and in those suffering from AIDS. The reader will learn about the multiple pathways for itch and their interactions with pain. The relationship between these closely related, yet distinct sensory phenomena, will be emphasized. Both itch and pain use several common molecules to send signals to the brain. Thus, drugs that have been, and are being, developed as analgesics may also attenuate intractable itch. This has been an exciting and very necessary turn of events since traditional H-1 receptor antagonists are ineffective in blocking the pruritus associated with kidney failure and cholestasis. The clinical chapters will provide insights into contemporary treatment regimens for pruritus in different human scenarios. This consolidated reference book addresses the various aspects of nano biomaterials used in ophthalmic drug delivery, including their characterization, interactions with ophthalmic system and applications in treatments of the ophthalmic diseases and disorders. In the last decade, a significant growth in polymer sciences, nanotechnology and biotechnology has resulted in the development of new nano- and bioengineered nano-bio-materials. These are extensively explored as drug delivery carriers as well as for implantable devices and scaffolds. At the interface between nanomaterials and biological systems, the organic and synthetic worlds merge into a new science concerned with the safe use of nanotechnology and nano material design for biological applications. For this field to evolve, there is a need to understand the dynamic forces and molecular components that shape these interactions. While it is impossible to describe with certainty all the bio physicochemical interactions at play at the interface, we are at a point where the pockets of assembled knowledge are providing a conceptual framework to guide this exploration, and review the impact on future product development. The book is intended as a valuable resource for academics and pharmaceutical scientists working in the field of polymers, polymers materials for drug delivery, drug delivery systems and ophthalmic drug delivery systems, in addition to medical and health care professionals in these areas. This comprehensive text and reference addresses the full scope of contemporary contact lens science and practice. "pointers" increase the book's utility. Appendices offer guidelines on monitoring for psychiatric medications and list key medical abbreviations. Advances in itch research have elucidated differences between itch and pain but have also blurred the distinction between them. There is a long debate about how somatic sensations including touch, pain, itch, and temperature sensitivity are encoded by the nervous system. Research suggests that each sensory modality is processed along a fixed, direct-line communication system from the skin to the brain. Itch:

Mechanisms and Treatment presents a timely update on all aspects of itch research and the clinical treatment of itch that accompanies many dermatological conditions including psoriasis, neuropathic itch, cutaneous t-cells lymphomas, and systemic diseases such as kidney and liver disease and cancer.
